FOR DEMOGRAPHY AND
GLOBAL HUMAN CAPITAL

The End of World Population Growth, Ageing, Education and Sustainable Development

Wolfgang Lutz

Semmering, 29.10. 2011

3 Main Points

Wittgenstein Centre

- **Confusing differences in demographic outlook:** Ageing and Shrinking in Europe and Eastern Asia – “explosive” growth in Africa
- **Age is not what it used to be:** 60 is the new 50 and 70 is the 60
- Population Size and Distribution (by place of residence, **age und education**) **matter critically** for mitigation and adaptation to climate change.

World Population from the year 1000 to 2100

data:

Figure 3. Eastern European population, in millions

Figure 2. Sub-Saharan Africa population, in millions.

Figure 4. Population of China and Cambodia, Hong Kong, Laos, Mongolia, North Korea, Taiwan, Vietnam, in billions.

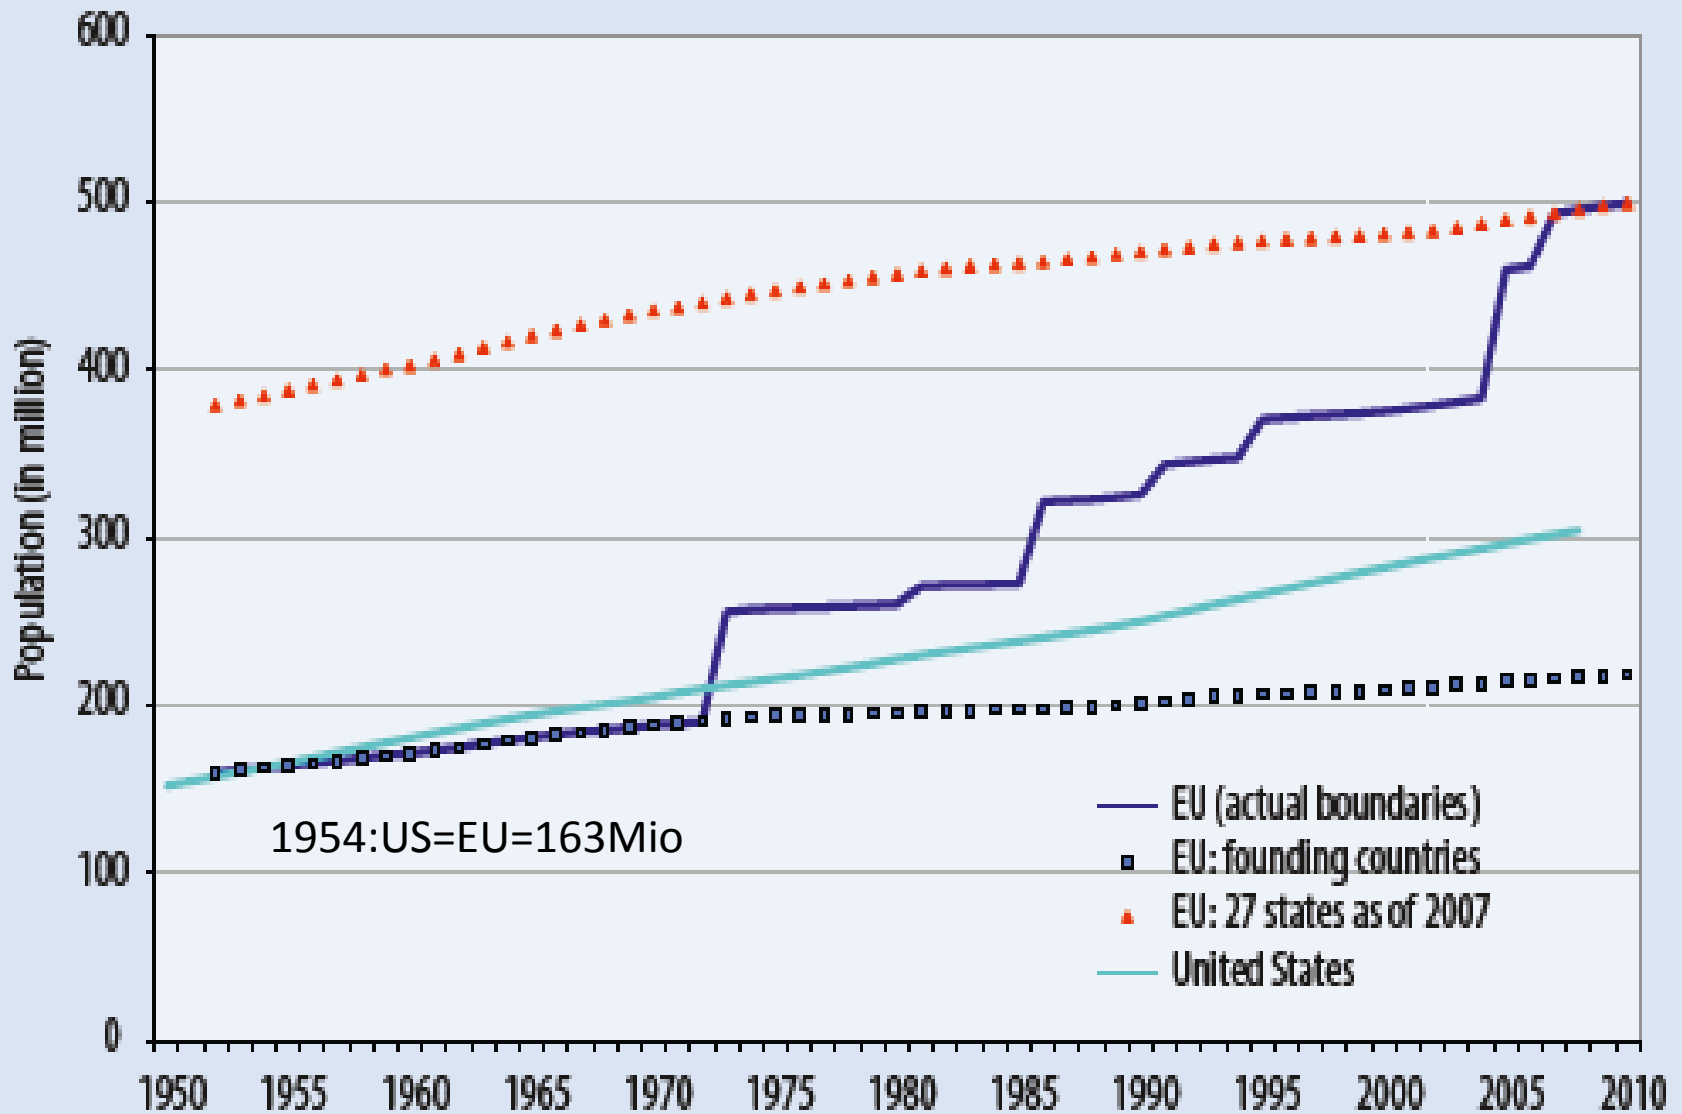

Figure 2: Population growth in the European Union and its predecessor as compared with the United States, 1952-2010

Redefining old age dependency

Wittgenstein Centre

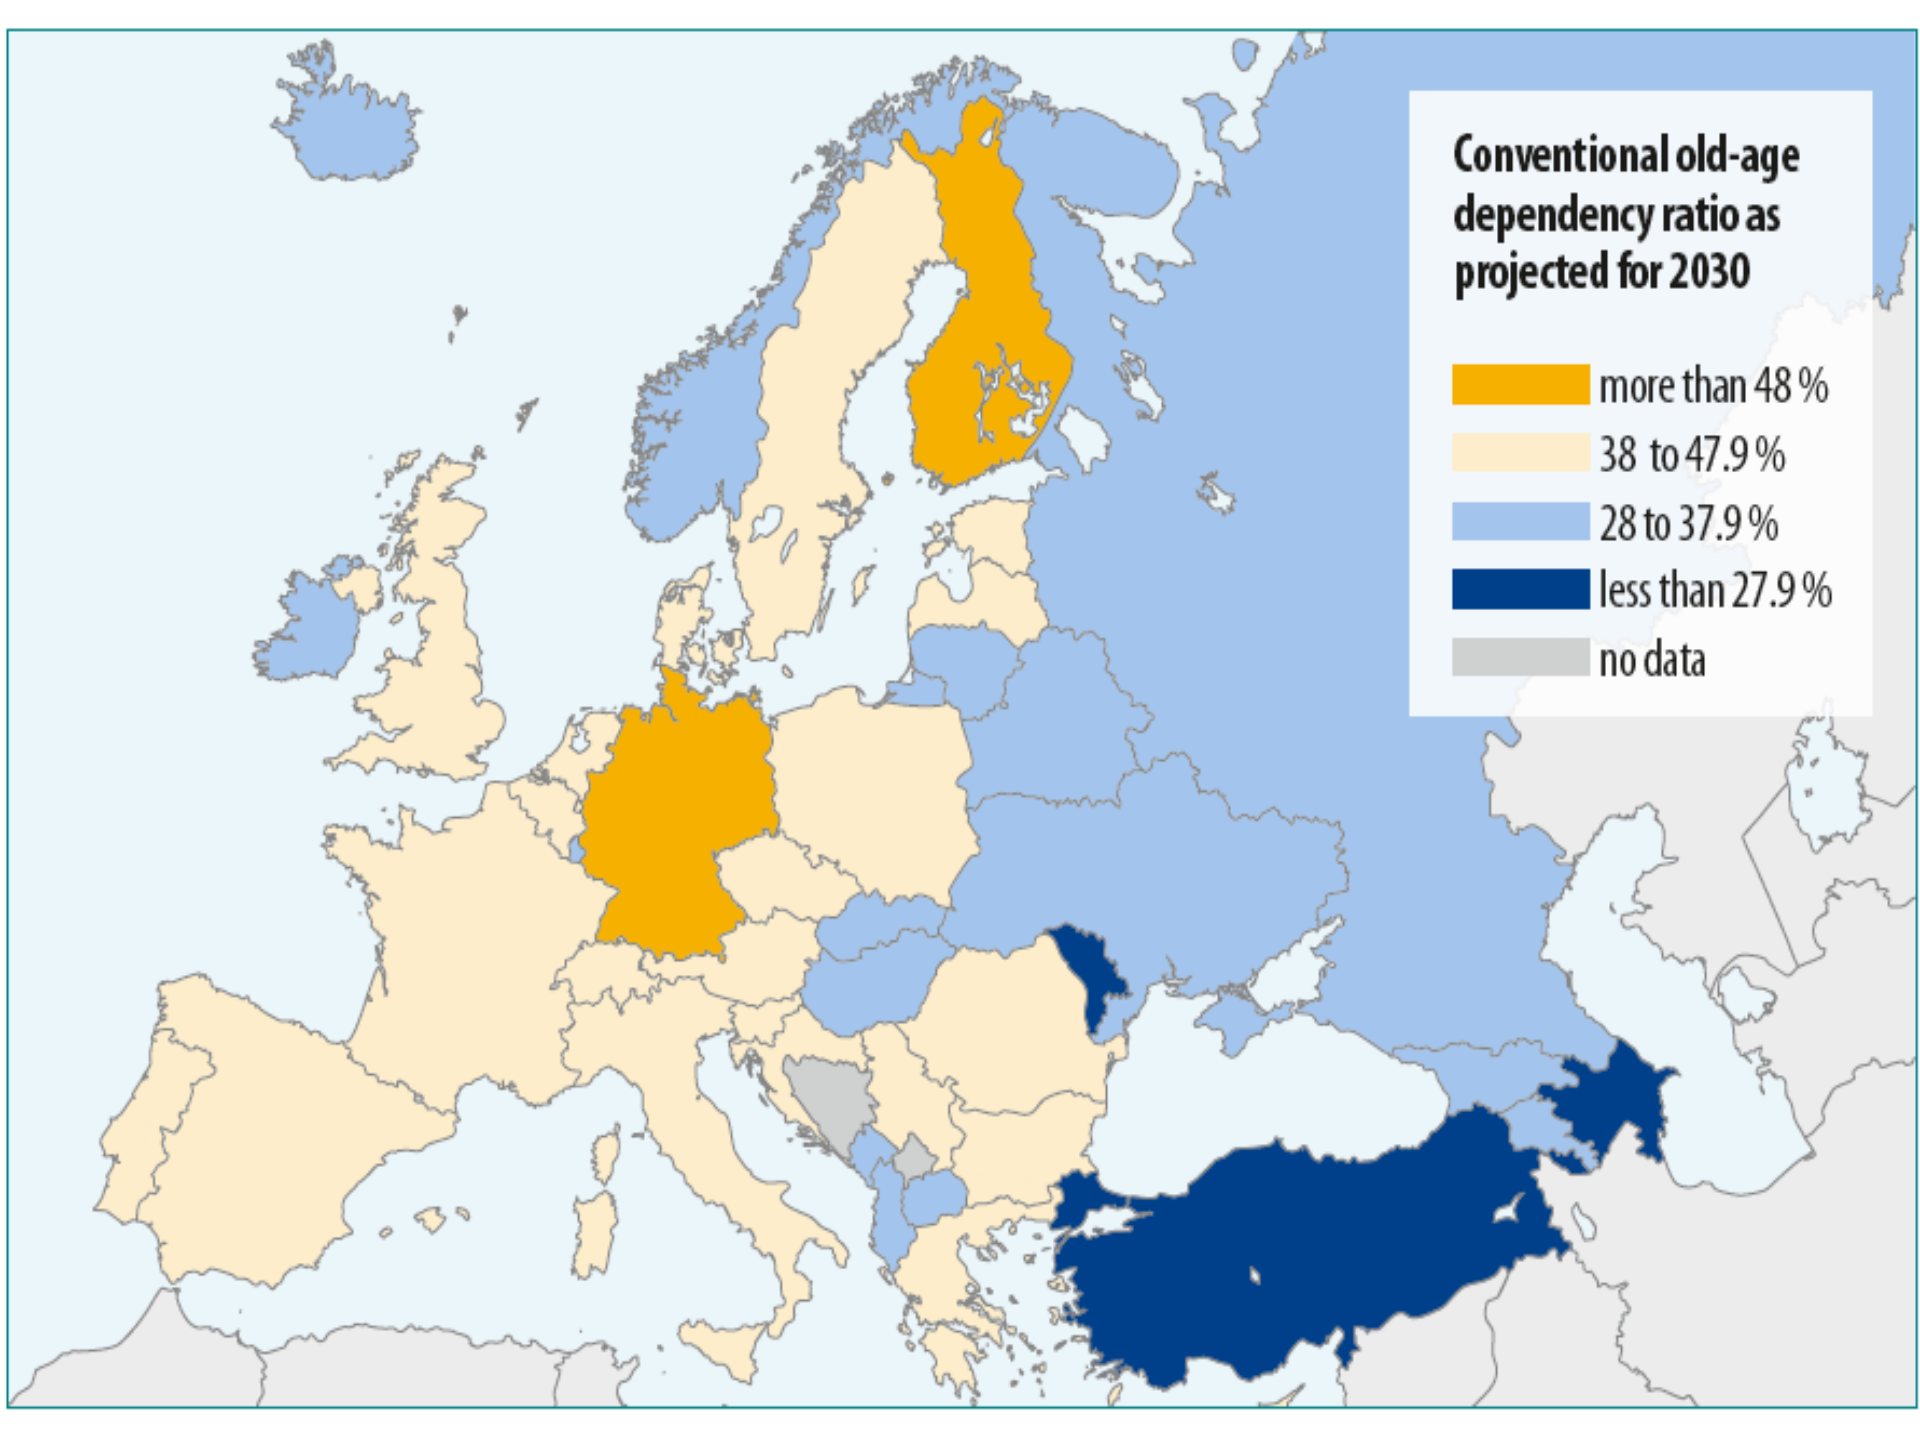

$$\text{OADR} = \frac{\text{Number of people aged 65 years or older}}{\text{Number of people aged 20 to 64}}$$

the VID and IIASA: the prospective old-age dependency ratio. In the POADR, the threshold of being old is not fixed but linked to life expectancy. People are considered old when the average remaining life expectancy in their age group is less than 15 years.

$$\text{POADR} = \frac{\text{Number of people older than the old-age threshold}}{\text{Number of people aged 20 to the old-age threshold}}$$

Conventional old-age dependency ratio as projected for 2030

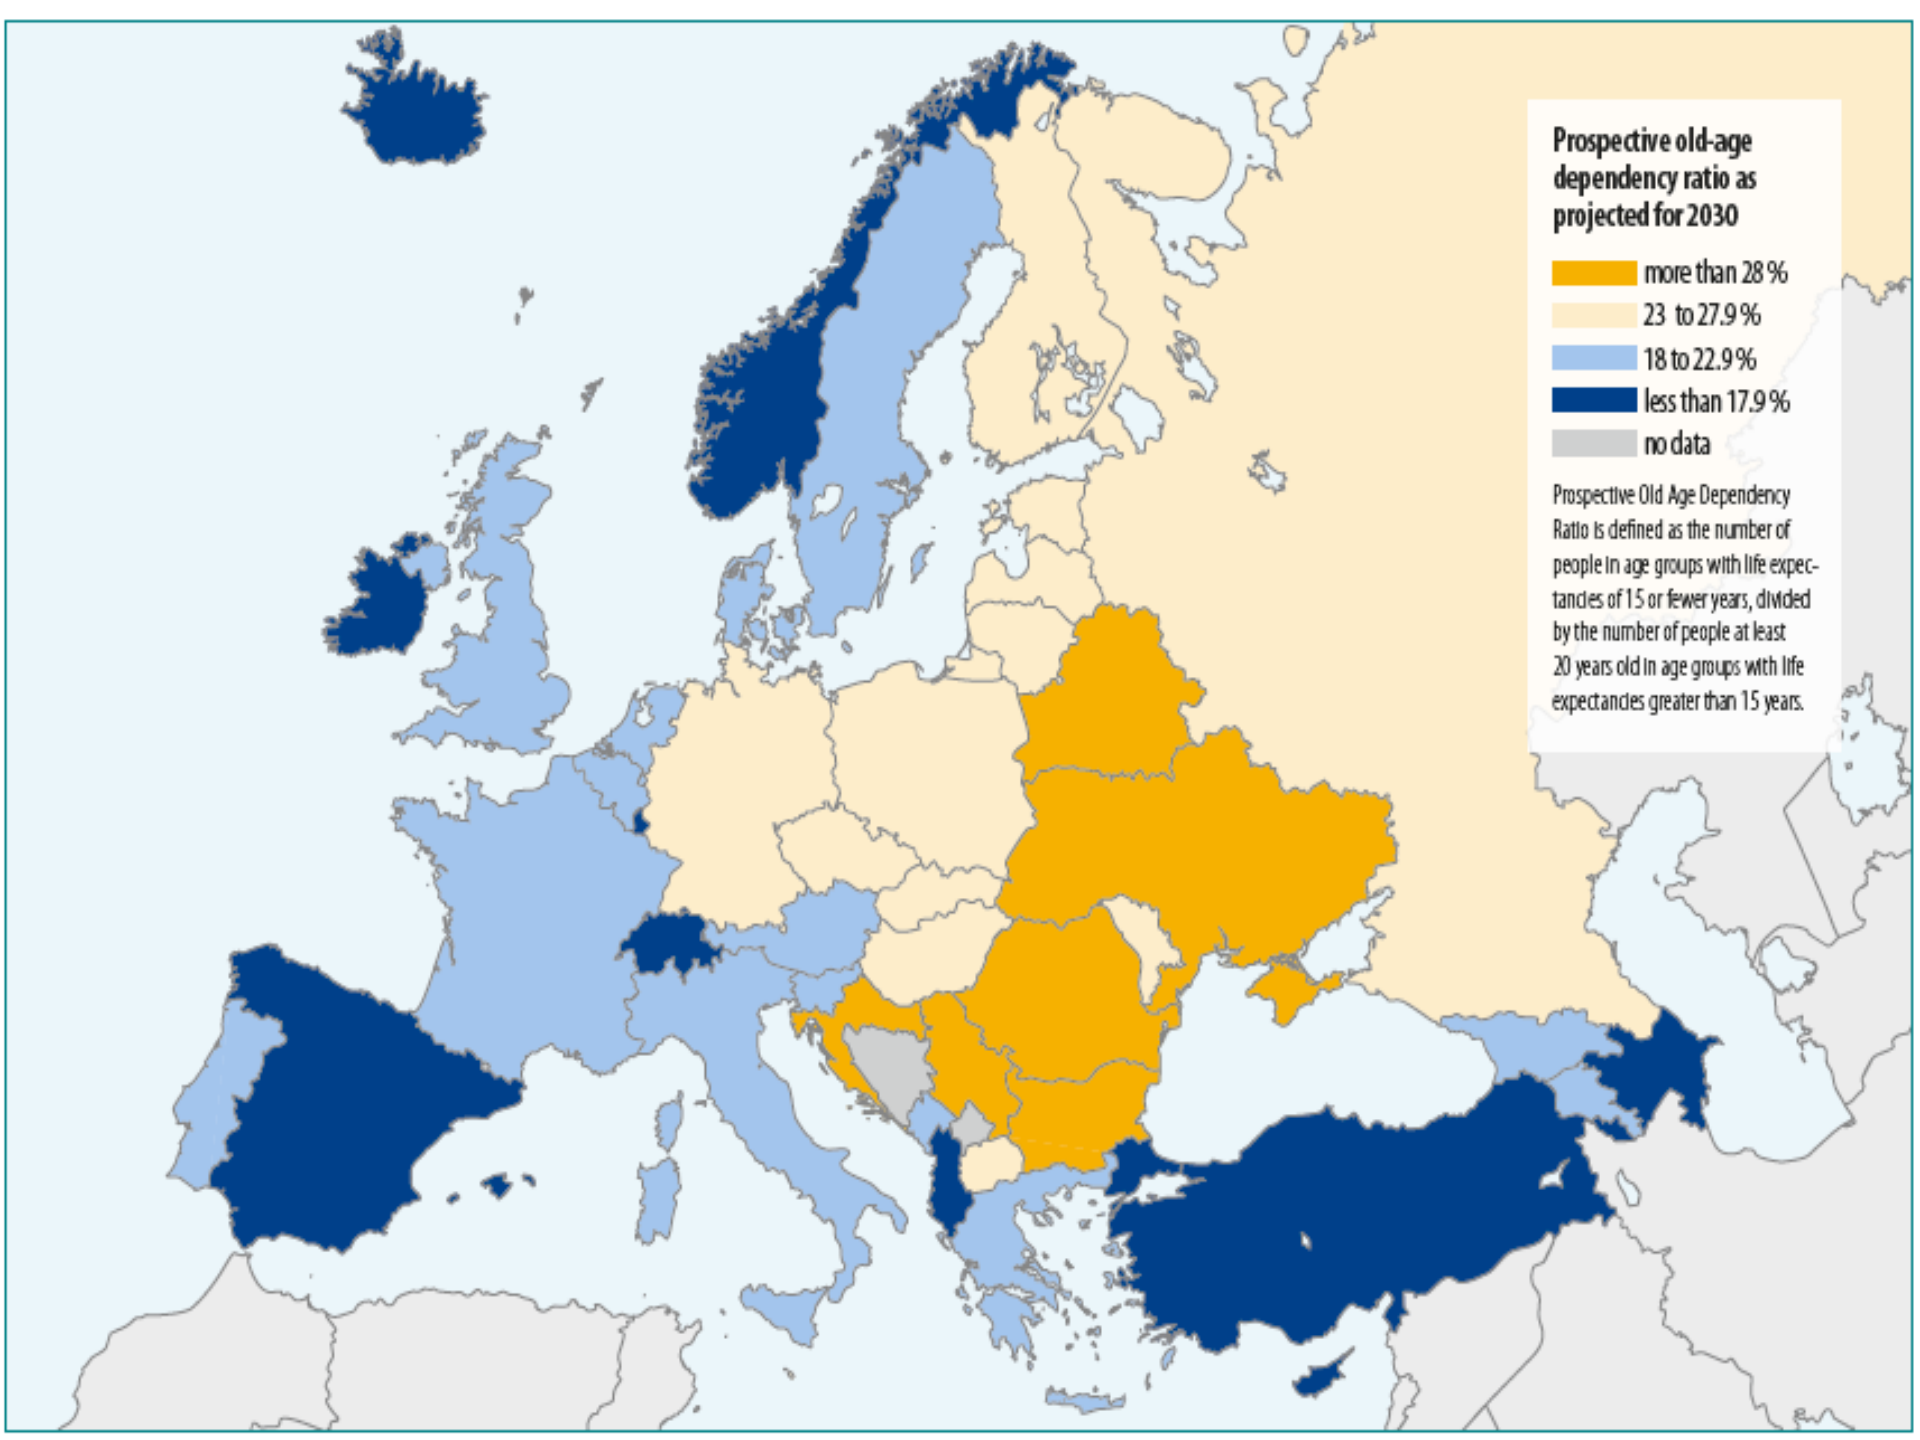

- more than 48 %
- 38 to 47.9 %
- 28 to 37.9 %
- less than 27.9 %
- no data

Prospective old-age dependency ratio as projected for 2030

- more than 28 %
- 23 to 27.9 %
- 18 to 22.9 %
- less than 17.9 %
- no data

Prospective Old Age Dependency Ratio is defined as the number of people in age groups with life expectancies of 15 or fewer years, divided by the number of people at least 20 years old in age groups with life expectancies greater than 15 years.

Wittgenstein Centre

Focus on the Human Resource Base for Sustainable Development

- Human Resources refer to the ability of people to help themselves and help others.
- They crucially depend on age, health, education, motivation, social networks etc.
- Education is central: Learning from the first day to old age.
- Formal education (school) is only one aspect of this that is fairly easy to measure.
